

Append Value

This allows logging(Log4J) to preserve the old log after the server is restarted.

Replace the following code in config\log-config.xml:

Existing code shown in your **log-config.xml** for the Server.log appender -

```
<appender name="Server"
class="org.apache.log4j.RollingFileAppender">
<param name="File" value="../log/server.log"/>
<param name="Append" value="false"/>
<param name="Encoding" value="UTF-8"/>
<param name="MaxBackupIndex" value="5"/>
<param name="MaxFileSize" value="500KB"/>
<layout class="org.apache.log4j.PatternLayout">
    <param name="ConversionPattern"
        value="%d{ISO8601},%t,%-5p, %c{2} - %m
%n"/>
</layout>
</appender>
```

Change the above code to(Append value = true) -

```
<appender name="Server"
class="org.apache.log4j.RollingFileAppender">
<param name="File" value="../log/server.log"/>
<param name="Append" value="true"/>
<param name="Encoding" value="UTF-8"/>
<param name="MaxBackupIndex" value="5"/>
<param name="MaxFileSize" value="500KB"/>
<layout class="org.apache.log4j.PatternLayout">
    <param name="ConversionPattern"
        value="%d{ISO8601},%t,%-5p, %c{2} - %m
%n"/>
</layout>
</appender>
```

Note: This also applies to the rest of the appender - JDBC, Jetty, Activity & Job logs.
