

JDBC Datasource Connectivity with Vertica

Vertica Database allows the connection with either JDBC or ODBC drivers.

We recommend using the JDBC driver instead of using the ODBC Driver. The Sun JDBC/ODBC Bridge Driver is meant for experimental purposes as there can be other implications with certain features unsupported.

JDBC Connection

- Driver - com.vertica.Driver
- URL - jdbc:vertica://(hostname):5433/(database)

Default Port used by Vertica Database is 5433.

Sample JDBC Connection Details

- Driver - com.vertica.Driver
- URL - jdbc:vertica://host001:5433/Stock_Schema

This connectivity is verified on Vertica DB 2.0.5-0 32 bit using Fedora Core 6.
