

Calculating the Number of Days Between Two Dates

Elixir offers a in-built function to calculate number of days in between two dates.

```
Number elxfn.dateDiff(DateA, DateB, interval)
```

where interval values for dateDiff are: "s", "m", "h", "d" (seconds, minutes, hours and days).

The other date related functions are as follows:

- Date elxfn.offsetDays(origDate, numDays)
- Date elxfn.offsetMonths(origDate, numMonths)
- Date elxfn.offsetYears(origDate, numYears)
- Date elxfn.offsetDate(origDate, numYears, numMonths, numDays)
