

Dynamic Content

This sample demonstrates how to render different sections based on different values. During the rendering stage, the Render If script will run.

The following is an example:

1. Add the following script in the Section Wizard/Scripts under Render If for Section 1 -

=Code Snippet=

```
var ds = DataCacheManager.getCache("DataSource 1");  
  
ds.getString("Fruit") == "Apple";
```

2. Add the following script in the Section Wizard/Scripts under Render If for Section 2 -

=Code Snippet=

```
var ds = DataCacheManager.getCache("DataSource 1");  
  
ds.getString("Fruit") == "Orange";
```

Section 1 will be executed if the value from the datasource is "Apple" and Section 2 will be executed if the datasource is "Orange".
