Installing a JDBC Driver and Creating a Connection Pool

Perform the following steps to install a JDBC Driver in Ambience.

This document uses the SQL JDBC Driver as an example.

Notes:

- Steps 1 to 5 are for driver installation.

- Steps 6 to 10 are for creating a new connection pool using the installed driver.

1. Place the JDBC driver in the **/ElixirAmbience/lib** folder.

2. Restart Ambience server to load the JAR file.

3. Log in as **admin** to enable the driver.

4. Click **Admin --> Drivers**.

5. Find the driver name and tick the box to enable it accordingly.

6. Start Ambience Designer.

7. Select to a folder in the folder tree on the left hand pane. Right click and select **Add --> Connection Pool**.

8. Input the name of the connection pool.

9. Choose the driver.

10. Input the URL, User and Password before testing and saving the connection.
