

Email Targets

Scheduler Job to Send Generated Report by Email

For Version 7.0 onwards.

This sample shows how you can use Elixir Scheduler Designer hosted by Elixir Repertoire Remote interface to create a job to render a report and then send the report by email to a group of users.

[The sample](#) consists of the following:

- Guide.ppt – Explains the steps to set up this downloaded jar and create the job.
- Elixir.ds and Mailing-List.ds - Datasources which store the names, email addresses and the groups to which they belong.
- report.rml and FruitSales.ds - Sample report that is to be rendered.
- Mass Mailing.job
