API Demo to Render to Byte Array Output

Refer to the [sample file](#).

In our sample:

- import java.io.ByteArrayOutputStream;

- comment out FileOutputStream portion:

    //FileOutputStream fos = new FileOutputStream(

//new File("test.pdf"));

- create a ByteArrayOutputStream to store the output. Now, you can stream the bytes[] to the users

ByteArrayOutputStream bos = new ByteArrayOutputStream(); byte[] bytes = bos.toByteArray();
