

Using ERSCClient in JSP

Running an ERSCClient in JSP file from a web application such as Tomcat is supported.

The following procedure is tested using Repertoire Server version 7.5.0 with Tomcat-6.0.1.8

Here are the steps: (May vary depending on versions)

- 1) Start Elixir Repertoire Server.
- 2) Edit the [sample .jsp file](#) for the host, port, username, password, repository, parameters, and output file.
- 3) Insert the **.jsp** file into your web application folder (Example: *.\apache-tomcat\webapps\ROOT*)
- 4) Insert **Glint.jar**, **log4j.jar**, **RepertoireClient.jar** and **RepertoireJDBC.jar** from *.\Repertoire-Server\RepertoireServer\clients\lib* into *.\apache-tomcat\lib*
- 5) Now run the **.jsp** file. (Example: <http://localhost:8079/renderReportforERSCClient.jsp>)
