

Java 1.4 Support for Repertoire Client

For deploying J2EE solutions based on Java 1.4, download and read the following carefully:

Support for Java 1.4 Client Connectivity to Repertoire Server

[ERSCClient14.zip](#) [For Repertoire 7.1]

[ERSCClient14-7.2.0.zip](#) [For Repertoire 7.2.0]

This zipped file contain the following jar files:

- * commons-codec-1.3.jar
- * commons-httpclient-3.0.1.jar
- * commons-logging.jar
- * jdom.jar
- * log4j.jar
- * RepertoireClient14.jar
- * servlet-api.jar

Note: ALL jar files are required to be available in your Java Environment.

This client is tested and worked successfully on:

- * BEA-JRockitR27.3.1
- * Sun-JDK 1.4.2_11
- * IBM-JRE 1.4.2

With the Elixir Repertoire 7.1 release, you can now use a new Repertoire Client in Java 1.4 environment to connect to the Repertoire Server. Note that all the other Repertoire 7.x components such as the Server, Client, Designer and Runtime, require Java 1.5 (update 8 or later) to run, and Java 1.6 is recommended.
