

# On Click Control

[This example](#) will show you how to apply **on click actions** for a Dashboard.

In this example, when you click on any of the bars, a corresponding logo will appear.

Using this method, you can define and implement mouse **on click events** to dashboards.

This script inside **on click event** of **FruitSales** is doing the trick:

```
var key = thisEvent.split(":")[1];
```

```
PerspectiveState.showCard(null,key);
```
