Rendering a Section Dynamically

Please refer to our sample template dynamic_sections.rml.

In the template, there are 4 sections namely: Section 1, Section 2, Section 3 and Section 4.

Also, there are 4 parameters to capture the render sequence from user input namely: sa, sb, sc and sd.

In Function Definitions, please declare 4 global variables:

    a = Properties.getProperty("sa")-1;

    b = Properties.getProperty("sb")-1;

    c = Properties.getProperty("sc")-1;

    d = Properties.getProperty("sd")-1;

If user wants Section 3 to render 1st, sc = 1 and c = 0 because in human language 1 means 1st while it starts from 0 in java.

In a Report: On Render Begin, place the following code:

    getSequenceStep(a).setSectionName("Section 1");

    getSequenceStep(b).setSectionName("Section 2");

    getSequenceStep(c).setSectionName("Section 3");

    getSequenceStep(d).setSectionName("Section 4");
