

Accessing System Variables

Using `java.lang.System`, you can access system variables.

JDK 1.5

For JDK 1.5, use the following code snippet.

=Code Snippet=

```
java.lang.System.getenv(name)
```

Example:

Create a label with the field type set to 'Script' and type in the following :-

```
java.lang.System.getenv("temp");
```

JDK 1.4

For JDK 1.4, '`java.lang.System.getenv(name)`' is not available as it is deprecated since JDK 1.3, but has been restored in JDK 1.5.

To access system variables using JDK 1.4:

1. Set the variable and value at the console
2. Access using the following codes.

Example:

When launching Elixir Report Professional, include the sentence (`-DSample=Test`) in the batch file.

=Code Snippet=

```
java -DSample=Test -jar ERD-Launcher.jar
```

Create a label with the field type set to 'Script' and type in the following :-

=Code Snippet=

```
java.lang.System.getProperty("Sample");
```
